

E-Commerce Funnel & Unit Economics Analytics

Platform: Google BigQuery | 30-Day Conversion Analysis & Channel Attributions

TOTAL UNIQUE VISITORS 4,268	TOTAL CONVERTED BUYERS 708	OVERALL CONVERSION RATE 16.59%	TOTAL ATTRIBUTED REVENUE \$76,037.93
--------------------------------	-------------------------------	-----------------------------------	---

1. Conversion Funnel Progression & Leakage Analysis

Evaluation of unique visitor progression across all 5 discrete stages within the 30-day analytics window:

Stage Name	Unique Users	Step-to-Step CR	Drop-off Rate	Analytical Takeaway
1. Page View	4,268	100.00%	—	Total baseline top-of-funnel discovery
2. Add to Cart	1,332	31.21%	68.79%	Primary Funnel Leak: ~69% bounce before carting
3. Checkout Start	951	71.40%	28.60%	Strong purchase intent established
4. Payment Info	768	80.76%	19.24%	Minimal friction across billing steps
5. Purchase	708	92.19%	7.81%	Exceptional checkout finalization rate

2. Marketing Channel Unit Economics (30-Day Breakdown)

Traffic Source	Visitors	Buyers	Revenue (\$)	AOV (\$)	RPV (\$)	CR (%)
Email	445	151	\$15,190.16	\$100.60	\$34.14	33.93%
Paid Ads	820	173	\$18,438.42	\$106.58	\$22.49	21.10%
Organic	1,750	300	\$32,709.40	\$109.03	\$18.69	17.14%
Social	1,253	84	\$9,699.95	\$115.48	\$7.74	6.70%

3. Strategic Recommendations & Action Plan

1. UX & Website Architecture: Protect the Checkout Flow

Conversion from Checkout Start to Purchase is exceptionally strong (~74.5% cumulative, 92.2% payment-to-order). The transaction pipeline is technically frictionless.

Action: Freeze any planned checkout overhauls. Refocus UX and CRO engineering resources toward product detail pages (PDP) to lift the 31.2% View-to-Cart bottleneck.

2. Marketing Acquisition: Stop Over-Investing in Social for Direct Sales

Social media delivers nearly 30% of aggregate traffic (1,253 visitors) but suffers from the lowest conversion efficiency (6.70%), generating only \$7.74 per visitor compared to \$34.14 for Email.

Action: Shift social ad objectives from direct "Purchase" conversion to "Lead Gen" (email acquisition) and bottom-funnel "Retargeting." Add exit-intent email capture modals for incoming social traffic.

3. Channel Economics: Double Down on Email Marketing & Retention

Email delivers the highest conversion rate (33.9%) and yields 4.4x more revenue per visitor than Social. It represents our most cost-efficient retention channel.

Action: Invest in automated lifecycle workflows (welcome sequence, browse abandonment, cart reminder triggers) to capture the 68.8% of users who bounce before carting.

4. CAC Guardrails & Financial Audit

With average order values ranging from \$100 to \$115, acquiring Social users at blended costs above \$35 creates immediate customer acquisition unprofitability.

Action: Establish strict CAC ceilings by acquisition channel based on observed RPV benchmarks (\$22.49 for Paid Ads, \$7.74 for Social).

5. BigQuery Behavioral Velocity & Audit Log

User velocity benchmarks computed from verified event timestamps across the 30-day BigQuery window:

Funnel Velocity Step	Average Duration	Operational Assessment
Page View to Cart	11.19 minutes	High initial engagement; rapid decision-making upon landing.
Cart to Purchase	13.36 minutes	Friction-free checkout pipeline with negligible abandoned sessions.
Total Time to Conversion	24.55 minutes	Full lifecycle completes in under 25 minutes for converting visitors.
